Case Study

Central Coast Winery

A Central Coast winemaker near Paso Robles California wanted a durable floor that was aesthetically pleasing. Ucrete HPQ was recommended and subsequently installed, it was selected because the color quartz finish provided slip resistance and was aesthetically pleasing. The floor was 1/4" thick with a Polyurethane Cement base that is incredibly durable. A 6" Integral cove base was installed in many of the rooms as well as a 45 degree radius at the column bases.
